

MiniMiles × MiniPay

Week 3 Raffle Report · Rounds 185–194 · Celo Mainnet

1,621 unique wallets participated across 10 rounds, buying 73,909 tickets total. Average wallet TVL was \$65.90 (98.2% USDT). Two product changes took effect at Round 188 — minimum entry balance dropped from \$10 to \$1, and raffles were moved to the top of the app — driving a two-day surge of 1,040 new wallets and a daily baseline that held more than double its pre-change level through Round 194.

DAILY PARTICIPATION

Rounds 185–194 — players and ticket volume

ROUND	DAY	PLAYERS	NEW WALLETS	TICKETS	TICKETS / PLAYER
185	1	144	144 (all new)	4,529	31.5
186	2	158	58	4,523	28.6
187	3	148	25	4,559	30.8
188	4	536	394	13,479	25.1
189	5	901	646	13,578	15.1
190	6	343	92	6,774	19.8
191	7	341	75	6,768	19.9
192	8	288	46	4,937	17.1
193	9	348	68	7,493	21.5
194	10	284	73	7,269	25.6

■ **Round 188 product changes:** minimum entry balance dropped from **\$10 to \$1** and raffles moved to the **top of the app UX**. Result: 536 then 901 players (394 and 646 net-new wallets) over the next two rounds — the largest surge of the campaign — and a post-change baseline (R190–194 avg **321 players/day**) that held more than **2× above** the pre-change baseline (R185–187 avg **150/day**). This is acquisition driven by the lowered barrier and improved visibility, not external marketing.

RETENTION

Day-over-day return rates

PAIR	RETENTION	NOTE
Day 1 → 2	69.4%	Strong opening retention.
Day 2 → 3	67.7%	Stable core cohort.
Day 3 → 4	75.0%	Best of the week — right before the spike.
Day 4 → 5	43.1%	First spike cohort (R188) partially returns.
Day 5 → 6	22.3%	Lowest point — second spike cohort (R189) mostly does not return.
Day 6 → 7	49.9%	Recovering toward core baseline.
Day 7 → 8	47.8%	Still digesting the spike inflow.
Day 8 → 9	60.4%	Back to healthy core retention.
Day 9 → 10	43.7%	Soft close, within normal week-end variance.

Reading the dip: the two lowest points (43.1%, 22.3%) follow directly from the Round 188 minimum-balance drop (\$10→\$1) and UX change, not a normal mid-week fatigue dip. A \$1 minimum admits far more casual, low-commitment entries than \$10 did — some short-term churn in this newly-unlocked segment is expected. Pre-change core retention (D1→2, 2→3, 3→4) averaged ~70.7%; the settled post-change pairs (D6→7 through D9→10) averaged ~50.5% — lower, but still a healthy returning base for a much less pre-qualified cohort.

TICKET VOLUME BY ROUND

Round 185	4,529
Round 186	4,523
Round 187	4,559
Round 188	13,479
Round 189	13,578
Round 190	6,774
Round 191	6,768
Round 192	4,937
Round 193	7,493
Round 194	7,269

LOYALTY

Wallet segments by rounds played (of 10)

■ **96 wallets played 8+ of 10 rounds.**
A near-equivalent loyalty threshold to Week 2's "5+ of 7" tier (108 wallets). Prioritise with streak rewards and early access.

■ **65.2% one-time players.**
Improved from Week 2's 75.7% despite a ~56% larger wallet base — a healthier retention mix even while scaling.

WEEK 3 SUMMARY

Root cause confirmed: at Round 188, minimum entry balance dropped from \$10 to \$1 and raffles moved to the top of the app. This removed the biggest participation barrier and the biggest visibility barrier at once — and it worked: 1,040 new wallets in two rounds, with the daily baseline holding over 2× higher for the rest of the week. **The decline in avg wallet TVL** (\$150.54 → \$89.23 → \$65.90 across W1–W3) is now **partly mechanical** — a \$1 minimum admits far smaller balances into the average, on top of the natural effect of a broadening user base. **One-time player rate still improved** to 65.2% (from W2's 75.7%) despite the much lower entry bar, suggesting the new \$1-minimum cohort isn't meaningfully lower quality in terms of return behaviour.

HEADLINE METRICS

Cumulative campaign trend

METRIC	WEEK 1 (7 rds)	WEEK 2 (7 rds)	WEEK 3 (10 rds)
Unique Wallets	432	1,040	1,621
Total Tickets	57,038	39,090	73,909
Avg Wallet TVL	\$150.54	\$89.23	\$65.90
% TVL in USDT	98.6%	98.1%	98.2%
Core Tickets / Player*	~40	~27	~23

* Tickets/player on non-spike rounds. TVL decline from W2→W3 is partly mechanical: the R188 minimum-balance change (\$10→\$1) admits smaller balances into the average.

WEEK-OVER-WEEK GROWTH

METRIC	W1 → W2	W2 → W3
Unique Wallets	+141%	+56%
Total Tickets	−31.5%	+89.0%
Avg Wallet TVL	−40.7%	−26.1%

RETENTION & LOYALTY TREND

WEEK	CORE AVG RETENTION*	LOWEST DIP	ONE-TIME PLAYERS %	TOP-TIER LOYALTY
Week 1	~55%	40.5% (D3→4)	66.0%	15.7% (≥5 of 7 rds)
Week 2	~65%	19.2% (D2→3)	75.7%	10.4% (≥5 of 7 rds)
Week 3	~55%	22.3% (D5→6)	65.2%	5.9% (≥8 of 10 rds)

* Core retention excludes spike-cohort pairs (the day immediately following a viral surge round).

Bottom line: the Round 188 product changes — minimum balance \$10→\$1, raffles moved to the top of the app — are validated by the data: they roughly doubled the daily active baseline and it held for the rest of the week, not just a brief spike. The cross-week TVL decline is now substantially explained by this policy change rather than purely organic dilution. The open question for Week 4 is whether the new baseline holds or decays, and whether the \$1-minimum cohort converts into wallets with meaningful future spend or stays low-balance. Recommend tracking the R188/189 cohort's Week 4 retention specifically.
